this book provides a detailed study of nonlinear partial differential equations satisfying certain nonstandard growth conditions which simultaneously extend polynomial inhomogeneous and fully anisotropic growth the common property of

the many different kinds of equations considered is that the growth conditions of the highest order operators lead to a formulation of the equations in musielak orlicz spaces this high level of generality understood as full anisotropy and inhomogeneity requires new proof concepts and a generalization of the formalism calling for an extended functional analytic framework this theory is established in the first part of the book which serves as an introduction to the subject but is also an important ingredient of the whole story the second part uses these theoretical tools for various types of pdes including abstract and parabolic equations but also pdes arising from fluid and solid mechanics for connoisseurs there is a short chapter on homogenization of elliptic pdes the book will be of interest to researchers working in pdes and in functional analysis

this volume lists 20 000 european companies providing essential business services including coverage of companies in the emerging eastern european market giving such information as company names addresses and contact numbers details of annual sales services offered scope of operations and principal officers it is intended that the range of services covered could assist other internationally minded companies to expand their operations and market goods in europe business researchers could find it useful in seeking out new market niches
